

**Each microbiota is unique.
So are our analyses.**

GD Biotech
AGRI-AGRO SOLUTIONS

*The Microbiota,
it's what we do best!*

At GD Biotech, we've been analysing the microbiota long before it became a buzzword. From the fields to the labs, from muddy boots to statistical modelling, we support you every step of the way — from field trials right through to the visualisation of your results.

And that's something very few can truly deliver.

WHAT SETS US APART (AND NOT JUST A LITTLE):

- **Tried, tested and trusted methodologies**, across multiple matrices
- **A hybrid team** : biologists and bioinformaticians, minds working in sync.
- **MicIV** : our intuitive visualisation tool - less jargon, more clarity.

OUR SERVICES

CowtoLab® : A tailor-made on-farm trial, where dairy cows get involved in R&D!

Analyse du microbiote : from sampling kit to final results, we manage the entire process « *and whatever the matrix, if there are microbes, we're in* ».

HOME-GROWN MAISON : COWBIOT®

The goal? Spotting the top heifers - the ones that will live longer, stay healthier, produce better, and cut your carbon footprint without breaking a sweat.

The method: a simple qPCR test on heifer dung - and voilà, we identify the immune system champions.

The result? Stronger cows, more sustainable farms.

And now?

After developing these tools for the **Gènes Diffusion group**, we're putting our expertise at the service of **other ambitious organisations. Soil, nutrition, water, human health... whatever the sector**, our microbiome know-how is ready to supercharge the boldest projects.
